

Helping you find ways to improve your business

A flexible Business Definition methodology

To survive and prosper in business today, managers and other decision-makers need to understand every aspect of their organisation. Such insight enables them to optimise the benefits being gained from the strongest factors of the business and work to strengthen the weaker elements. A primary objective is to identify the best ways to improve business performance so that target levels are achieved and revenues and profits increased.

Based on proven IT and business skills and with many years' experience providing solutions for major blue chip companies, **BI Solutions** can help you understand and define your business requirements. We can then also support the implementation of technologies and processes to drive business improvements. Because no two companies are the same, our Business Definition solutions are tailored to meet each company's specific needs.

Your business in focus

Many ways of improving business performance depend on the IT and processes being used. In this arena, projects can range from enhancing and upgrading existing technologies and processes, to implementing completely new systems and approaches.

Before any solution can be chosen and implemented however, it is essential to have a clear understanding of the business requirements, the options available and the factors that recommend them. It is also necessary to know the business benefits and vision, the budgets available and the timescales involved.

Customised solutions

By covering these and other critical issues, our Business Definition solution helps companies to improve their business. It can involve any combination of the following deliverables and can be customised to meet each company's specific requirements.

- We can produce a *Business Definition Document* which would identify the exact needs of a business requirement; this is achieved by carrying out a *Scoping Study* with a *Gap Analysis*
- We can help you *Evaluate Options* and *Recommend Solutions* that are best-suited to the business requirements
- A *Proof of Concept* confirms the suitability of a proposed solution. Once a solution is chosen, we can then carry out a *Detailed Analysis* of the project
- To ensure that the project is delivered on time and within budget, we can develop the necessary *Project Plans* and *Resource Plans*, highlighting key milestones.

In addition, **BI Solutions** can provide the resources - from project managers to technical developers - that are required to deliver the project to completion.

Using a formal yet highly flexible methodology, we implement Business Intelligence solutions in discrete phases. This enables us to ensure that our clients achieve business benefit - fast.

To discuss how we can help your organisation, please call **BI Solutions** on the number below or alternatively contact either Jas Rehill or Jehan de Silva by email:
